

**ORDER NO. 216S**

**2-Meter OSCAR Satellite Antenna**

**Model 216 SAT**

PN 802050-2

# INSTRUCTION MANUAL

## GENERAL DESCRIPTION

The Hy-Gain Model 216 SAT is a high-performance "OSCAR" (Orbiting Satellite Carrying Amateur Radio) satellite antenna for the 145.8 - 146.0 MHz frequency band. It features polarization switching circuitry for manual selection of either Right Hand Circular Polarization (RHCP) or Left Hand Circular Polarization (LHCP). This flexible design is suitable for worldwide applications with any of the amateur satellites having either an uplink or downlink in the 145.8 - 146.0 MHz frequency range, such as AO-10, FO-12, AO-13, DO-17, AO-16, LO-19, UO-22, KO-23, RS-10, RS-11, RS-12, RS-13, etc. These include modes A, B, J, JA, JD, JL, KA, KT, and T.

It is also usable over the entire 2-meter band, 144-148 MHz; and could be used with future satellites placed near 144.5 MHz, or with terrestrial modes such as repeaters and SSB/CW DX. The vertical and horizontal sets of elements may be fed with separate feedlines for total flexibility.

The 216 SAT Antenna features 16 elements (total) on a 2.1 wavelength boom. Each set of 8 elements is designed to give 10.7 dBd gain based on a (quasi-logarithmic tapering of element spacings. This design also gives a very clean pattern, with very small sidelobes. The 216 SAT also features high efficiency "T" matched driven elements for easy assembly and high gain. True R F, 50 ohm switching relays are rated at 200 watts PEP and contribute to improved VSWR. Feedpoints are encapsulated for long life in all types of climates. Most hardware is stainless steel including the element retaining rings (pushnuts). All insulators are UV protected. The coaxial assembly is made from high-quality Polytetrafluoroethylene (PTFE) dielectric and Fluorinated Ethylene Propylene (FEP) jacketed coaxial cable.

The 216 SAT "OSCAR" beam can be used with the Hy-Gain 70-30 SAT 70 cm OSCAR Beam and the 217S, fiberglass, 5 foot boom, be used with other commercial or "homebrew" "OSCAR" antennas. The 216 SAT antennas may be stacked for more gain.

## SPECIFICATIONS

### *Mechanical*

Boom Length.....	168.75 in. (429 cm)
Maximum Boom O.D. ....	1-25 in. (32 mm)
Turning Radius (Max) .....	8.ft. (2.44 m)
Total Number of Elements .....	16
Longest Element .....	39.5 in. (100 cm)
Wind Survival .....	80 mph (128.7 km/h)
Mast/Boom Diameter Accepted .....	1.250-1.625 in. (32 mm - 41 mm)
Wind Area .....	1.1 sq. ft. (.102 sq. m)
Net Weight .....	7.1 lbs. 3 oz. (3.26 kg)
Stacking Distance (min).....	82 in. (2.08 m) (1.0 wavelength)

## SPECIFICATIONS

### *Electrical*

Frequency Range (Max) .....	144-148 MHz
*Gain (at 145.9 MHz).....	10.7 dBdc
*Beamwidth, 1/2 power E-plane .....	40-43 degrees
*Beamwidth, 1/2 power H-plane.....	50 degrees
*Sidelobe Level (db) .....	-20 (E), -13 (H)
*Front-to-Back Ratio (Max).....	22 dB
Ellipticity (Max) .....	3 dB
Power Rating .....	200 W/PEP
Connector .....	UHF (SO-239)
Polarity Switch Voltage and Current Requirements .....	10-14 VDC @ 40-60 mA
VSWR (144-146 MHz).....	less than 1.5:1

### PREPARATION FOR ASSEMBLY

**FOR OUR OVERSEAS CUSTOMERS:** If you use the Metric System, see the American-to-Metric Conversion Table in the rear of this manual. Most illustrations in this manual will provide both American and Metric dimensions.

Choose a moderate-sized clear area to assemble the 216 SAT OSCAR Beam. The area must be at least 5' x 5' (1.5 x 1.5 m) for each boom section. A bench vise is recommended to hold the booms while the elements are being installed. An alternate method is to drive a 5' (1.5 m) length of mast material into the ground and attach the entire boom and boom-to-mast bracket to this mast temporarily during assembly.

If you assemble this antenna over a grassy area, precautions should be taken so that hardware is not accidentally lost during assembly. A concrete driveway is an excellent area for assembly.

Tools: The following tools are required for easy assembly of the 216 SAT OSCAR Beam:

Qty	Tool Type
1	Tape Measure, 12 ft.
1	Nut Driver, 1/2 inch
1	Nut Driver, 7/16 inch
1	Nut Driver, 3/8 inch
1	Nut Driver, 11/32 inch

One nut driver should have a hollow handle.

This can be used for pushing on the pushnuts. Standard wrenches or adjustable wrenches may also be used in place of the nut drivers.

When unpacking your antenna, check inside of all tubing for small parts and elements. To conserve space, these smaller articles are sometimes put inside larger pieces. Check all parts against the parts list in the rear of this manual to ensure no parts are missing.

Make all measurements to the given dimensions, plus or minus, no more than 1/16 inch! The assembly of this antenna will be easier if you read this manual completely through at least twice and follow the recommended directions. Allow at least 4 hours for assembly.

### BOOM ASSEMBLY

Select the boom sections, boom-to-mast bracket parts and hardware as shown in Figure 1. Identify the boom sections by their length and diameter, and identify the mating ends from the dimensions shown in Figure 1. Assemble the boom sections and boom-insert with the hardware as shown, and tighten securely.

NOTE: Another complete set of element mounting holes exists in the vertical plane and is not shown in Figure 1. This set has element mounting holes which are offset approximately 20 1/4 inches towards the front of the boom assembly. This is 1/4-wave (90 degrees) at 146 MHz.

\*Gain and Patterns verified by Yagi Optimizer 4.0\* and NEC, and by measurements of full size antennas on Hy-Gain's antenna range.

After assembly, the boom-to-mast bracket may be rotated on the boom so that after mounting, the elements are in an "X" configuration. Securely tighten the 1/4"-20 x 3/4" hardware. When the bracket is in the desired position.

r

### ASSEMBLY OF DRIVEN ELEMENTS

Select the four (4) driven element halves, 7/16" x 18 1/2" (Item 12), T-Bar (Item 13), boom-to-element strap (Item 14), and driven element clamps (item 22) and associated hardware as shown in Figure 2.

Assemble the two driven elements to the boom as shown in Figure 2. The distance from the boom to the edge of the driven element clamps (Item 22) should be 8 5/16" (21 cm). Securely tighten all hardware. When the coax/switch assemble is installed later, you will decide on either LHCP or RHCP from the unswitched polarization.

### ASSEMBLY OF OTHER ELEMENTS

Select the two reflector elements, 3/16" x 39 1/2" (Item 1), marked with 2 black bands near one end of each. Also select four insulators (Item 21) and four - 3/16" pushnuts (Item 28).

Install the reflector elements on the rear boom as shown in Figure 2. Push one of the element insulators (Item 21) onto each reflector, so that its shoulder is 19 1/8" from the nearest end. Insert the long end of each reflector into the reflector mounting holes, as shown in Figure 2.

Item No.	Description
1	Reflector, 3/16"x 39 1/2"
2	D1, 3/16" x 35 1/2"
3	D2, 3/16" x 35 1/4"
10	Boom, rear, 1 1/4" x 56"
12	Driven Element, 7/16"x 18 1/2"
13	T-bar, 3/8"x 9"
14	Strap, boom-to-element
20	Caplug, 7/16"
21	Insulator, element
23	Bolt, #10-24 x 1/2", hex head
24	Bolt, #10-24 x 1 1/2", hex head
25	Bolt, #10-24 x 1", hex head
26	Bolt, 1/4"-20 x 3/4", hex head
28	Pushnut, 3/16"
29	Nut, #10-24, hex
30	Nut, 1/4"-20, hex
32	Lockwasher, 1/4" internal
34	Lockwasher, #10 internal
38	Bolt, #10-24 x 2"

**Figure 2**  
**Assembly of Driven Elements,**  
**Reflectors and Directors to Boom**

Slide another element insulator over the other end of the reflectors and push it onto each element until it seats into the mounting hole. Each element insulator should fit snugly into the mounting hole. Recheck the exposed length of the reflector and reposition if necessary.

Carefully slip the 3/16 inch pushnuts (Item 28) over each end of the two (2) reflectors, and push them along each element until they are snug against each element insulator. Check the exposed lengths of each reflector during this process, to ensure the correct dimensions.

NOTE: You may wish to use a hollow handled nut driver or a short length of tubing to help push on the element insulators and pushnuts. If you accidentally slide a pushnut on too far, then you should cut it off the element and try again with one of the spare pushnuts.

Select one each of elements D1 and D2. Identify these elements by the length and color bands listed in Table 1. Install these elements on the rear boom section in the horizontal set of holes shown in Figures 1 and 2. Start with D 1 adjacent to the driven element. Use the insulators and pushnuts, and assemble in the same manner as described earlier.

Select one element - D1. Install this element on the rear boom section in the vertical set of holes shown in Figure 2. D1 is adjacent to the vertical driven element. Use the insulators, pushnuts and methods as described for the other elements.

Select one each of elements - D3, D4, D5 and D6. Install these elements on the front and mid-boom sections in the horizontal set of holes shown in Figures 1 and 3.

Item No.	Part No.	Element	Total Length Inch	mm	Exposed Length Inch	mm	Color Band
1	160067	R	39 1/2	1003	19 1/8	486	Black (2)
2	160068	D 1	35 1/2	902	17 1/8	435	Brown
3	160069	D2	35 1/4	895	17	432	Red
4	160070	D3	35	889	16 7/8	429	Orange
5	160071	D4	34 3/4	883	16 3/4	425	Yellow
6	160072	D5	34 1/2	876	16 11/16	424	Green
7	160073	D6	34 1/4	870	16 9/16	421	Blue

Table 1  
Element Length & Color Band Identification

Item No	Description
3	D2, 3/16" x 35 1/4"
4	D3, 3/16" x 35"
5	D4, 3/16" x 34 3/4"
6	D5, 3/16" x 34 12"
7	D6, 3/16" x 34 1/4"
8	Boom, front, 1 1/8" x 57 1/4"
9	Boom, mid, 1 1/4" x 57 1/2"

**Figure 3**  
**Assembly of Directors to Boom**

Select the remaining elements - D2, D3, D4, D5 and D6. Install these elements on the front and mid-boom sections in the remaining holes in the vertical plane. Refer to Figure 3.

After the installation of all elements, check each exposed length from Table 1. Also check each set of elements to make sure they are in the proper order. If any element has to be adjusted or moved, there are extra pushnuts supplied for partial reassembly.

**ATTACHMENT OF COAX ASSEMBLY**

Select the coax/circularity-switch assembly (Item 17), the No. 8 hardware (Items 35, 36, and 37), and the No. 10 hardware (Items 23, 29, and 34). Attach one of the two sets of terminals to the front driven element's T-hars (Item 13), as shown in Figure 4. The No. K-32 x 1/2 bolt is used with the square lug, and the No. 10-24 x 1/2 bolt is used with the round lug. To achieve proper phasing, attach the feedpoint solder lugs as shown in Figures 5 and 6.

Use black electrical tape, and secure this coaxial cable to the boom on both sides of the rear D1 element. Loop backwards to attach its terminals to the rear driven element's T-bars, as shown in Figure 4. Use black electrical tape to secure

The other coaxial cable coming from the coupler tube should go around the boom and loop backwards to attach its terminals to the rear driven element's T-bars, as shown in Figure 4. Use black electrical tape to secure this coaxial cable and the extra loops of small coax.

r

Item No.	Description

37	Nut, #8-32, hex

**Figure 4**  
**Attachment of Coax Assembly**

**NOTE: Looking at rear end of boom and encapsulated feed points.**

**Figure 5**  
**Feedpoint Orientation for LHCP**  
**in the Unswitched Mode**

**NOTE: Looking at rear end of boom and encapsulated feed points.**

**Figure 6**  
**Feedpoint Orientation for RHCP**  
**in the Unswitched Mode**

**NOTE: To** achieve LHCP in the unswitched mode, the feedpoint solder lugs should be positioned as shown in Figure 5. To achieve RHCP in the unswitched mode, the feedpoint solder lugs should be positioned as shown in Figure 6.

The opposite polarization results when 10-14 volts DC is applied to the red and black wires. The black wire is at ground potential, and is directly connected to the shield of the coax, therefore a single wire may be used to switch this antenna if the minus (-) side of the switch power supply is connected to the shield of the coax in the "shack".

Either LHCP or RHCP will result if these attachment procedures are not followed (random attachment). The opposite polarity results when switched.

Each set of elements may be used independently for vertical and horizontal polarization if separate connections are made to each of the driven element's T-bars. Each set of eight elements will require its own feedline to the "shack". Each will produce 11.5 dBd gain.

The connections to each driven element would require a 4:1 coaxial balun and a split-coax feed. The "OSCAR" coax assembly should be removed and saved for later use.

**Table 2**  
**VSWR Chart**

**INSTALLATION**

The 216 SAT OSCAR Beam may be center mounted, and a fiberglass or other type of non-conducting boom must be used to achieve circular polarity. The boom-to-mast bracket will fit booms with 1 1/4" - 1 5/8" diameters.

The DC switching cables and feedline must be routed off the rear of the boom to achieve circular polarity. A low loss cable such as Belden 8214 or 9913 should be used with UHF (PL-259) connectors.

**WARNING:**

**Do Not allow any part of the antenna to touch power lines. This could cause severe burns or fatal injuries.**

When mounting the 216 SAT OSCAR Beam above any other antennas, allow at least 6.5 feet for clearance of the rear boom.

When mounting the 216 SAT OSCAR Beam on a common horizontal boom with other beams, allow at least 5 feet (center-to-center). The elements should be at a 45 degree angle with respect to the boom. This will minimize interaction between the antennas

**NOTE:** If you plan to use large diameter, heavy coaxial cable or if it is likely that the cables may accumulate ice, you will need to adjust the position of the boom-to-mast bracket on the 2 meter antenna boom for a good balance. This bracket is shown between horizontal elements D3 and D4. It may be placed behind the horizontal D3, so that the elevation rotator can turn freely in both directions through the desired range. In addition, counterweights may need to be added to the front of the booms (if the 70cm beam is also used) in extreme cases. The coaxial cables should be secured high on the vertical support mast to minimize the unsupported weight.

**SERVICE INFORMATION**

If you are unable to resolve technical problems, you should contact the Telex/Hy-Gain Customer Service Department in Minneapolis, Minnesota.

You should retain your sales receipt or other proof of purchase for antennas that are still under warranty. (See separate sheet for Telex Warranty.)

All requests, inquiries or warranty claims should be made to:

Amateur Department  
 Telex Communications, Inc.  
 9600 Aldrich Avenue South  
 Minneapolis, MN 55420  
 Phone: (612) 884-4051 or (612) 887-5528 or (800) 328-3771

### METRIC CONVERSION

Converting American measurements to Metric:  
Using the scale below to identify lengths of bolts, diameters of tubes, etc.. The American inch (1") and foot (1') can be converted in this way.

$$1 \text{ inch (1")} = 2.54 \text{ cm}$$

$$1 \text{ foot (1')} = 30.48 \text{ cm}$$

$$\text{Example: } 42" \times 2.54 = 106.7 \text{ cm}$$

FRACTION AND METRIC EQUIVALENTS FOR ONE INCH			
Fractional Inch	Millimeters	Fractional Inch	Millimeters
1/16	1.588	9/16	14.288
1/8	3.175	5/8	15.875
3/16	4.700	11/16	17.463
1/4	6.350	3/4	19.050
5/16	7.937	13/16	20.638
3/8	9.525	7/8	22.225
7/16	11.112	15/16	23.813
1/2	12.700	1	25.400

# INSTRUCTION SHEET

## GENERAL DESCRIPTION

The Hy-Gain 217S is a high-strength fiberglass boom designed to support circular polarized antennas for "OSCAR" communications. The 217S OSCAR-Boom features non-resonant metal sleeves at each end that allow tightening of antenna boom-to-mast brackets without crushing the boom. The OSCAR-Boom also features adjustable position metal sleeves for the elevation rotator's clamps. This allows the OSCAR antenna system to be completely balanced on the elevation rotator, therefore increasing its

reliability. The OSCAR-Boom has a maximum O.D. of  $1\frac{3}{8}$  inches (35 mm), which allows it to work with both the Alliance U100/U110 rotators and the KENPRO KR-500/KR-5400 rotators.

 UHF 432 - 438 MHz  
 Satellite Antenna

# INSTRUCTION MANUAL

## GENERAL DESCRIPTION

The Hy-Gain Model 70-30 SAT is a high-performance "OSCAR" (Orbiting Satellite Carrying Amateur Radio) satellite antenna for the 432-438 MHz frequency band. It features polarization switching circuitry for manual selection of either Right Hand Circular Polarization (RHCP) or Left Hand Circular Polarization (LHCP). This flexible design is suitable for worldwide applications with any of the amateur satellites having either an uplink or downlink in the 432-438 MHz frequency range such as AO-10, FO-12, AO-13, UO-14, AO16, LO-19, AO-21, UO-22, KO-23, etc. These include modes B, J, JA, JD, JL, L and S.

The 70-30 SAT antenna features 30 elements (total) on a 4.2 wavelength boom. Each set of 15 elements is designed to give 14.0 dBd gain based upon the NBS Tech Note 688. The 70-30 SAT also features high efficiency "Delta" matched driven elements for easy assembly and rugged durability. True RF 50 ohm switching relays are rated at 200 watts and contribute to improved VSWR. Feed points are encapsulated for long life in all types of climates.

Most hardware is stainless steel including the element pushnuts. All insulators are UV protected. The coaxial assemblies are made from high-quality Polytetrafluoroethylene (PTFE) dielectric and Fluorinated Propylene (FEP) jacketed coax cable.

The 70-30 SAT "OSCAR" antenna can be used with the Hy-Gain 216 SAT 2-meter "OSCAR" antenna and the 217S fiberglass 5 foot boom, or it can be used with other commercial or homebrew "OSCAR" antennas. The 70-30 SAT antennas may be stacked for more gain.

## PREPARATION FOR ASSEMBLY

**FOR OUR OVERSEAS CUSTOMERS:** If you use the Metric System, see the American-to-Metric Conversion Table in the rear of this manual. Most illustrations in this manual will provide both American and Metric Dimensions.

Choose a moderate-sized clear area to assemble the 70-30 SAT Oscar Beam. The area must be at least 24" x 63" for each boom section.

### SPECIFICATIONS

*Mechanical*

Boom Length .....	134 in. (340.4 cm)
Maximum Boom O.D .....	1.125 in (28.6 mm)
Turning Radius (Max) .....	71.25 in (181 cm)
Total Number of Elements .....	30
Longest Element .....	13 in. (33 cm)
Wind Survival .....	80 mph (128.7 km/h)
Mast/Boom Diameter Accepted .....	1.250 - 1.625 in (32 mm - 41 mm)
Wind Area .....	0.75 sq. ft. (.0697 sq. m)
Net Weight .....	4 lbs 14 oz (2.21 kg)
Stacking Distance (Min) .....	46 inches (1.17m) (1.7 wavelengths)

## SPECIFICATIONS

### *Electrical*

Frequency Range .....	432-438 MHz
Gain .....	14.0 dBdc
Beamwidth .....	28-30 degrees
Front-to-Back Ratio .....	25 dB
Ellipticity .....	3 dB Max.
Power Rating .....	200 W/PEP
Connector .....	Type N
Polarity Switch Voltage and Current Requirements .....	9-15 VDC @ 30-60 mA
VSWR (435-437 MHz) .....	Less than 1.5 when using fiberglass boom

A bench-vise with jaws no wider than 6 inches is recommended to hold the booms while the elements are being installed. An alternate method is to drive a 5' (1.5 m) length of mast material into the ground and attach the entire boom and boom-to-mast bracket to this mast temporarily during assembly. If you assemble this antenna over a grassy area, protection should be taken so that hardware is not accidentally lost during assembly. A concrete driveway is an excellent area for assembly.

**Tools:** The following tools are required for easy assembly of the 70-30 SAT OSCAR Beam:

<b>QTY</b>	<b>Tool Type</b>
1	Tape Measure, 12 ft.
1	Nut Driver, 1/2 in.
1	Nut Driver, 7/16 in.
1	Nut Driver, 3/8 in.
1	Nut Driver, 11/32 in.

A 3/8 inch by 6 inch tube (Item 35) is supplied to help install the insulators and pushnuts. Standard wrenches or adjustable wrenches may also be used in place of nut drivers.

When unpacking your antenna, check inside of all tubing for small parts and elements. To conserve space, these smaller articles are sometimes put inside larger pieces. Check all parts against the parts list in the rear of this manual to ensure no parts are missing.

Make all measurements to the given dimensions, plus or minus, no more than 1/16 inch! The assembly of this antenna will be easier if you read this manual completely through at least twice and follow the recommended directions. Allow at least 4 hours for assembly.

## **ASSEMBLY OF THE BOOM-TOMAST BRACKETS AND BOOM**

Select the boom-to-bracket parts, boom sections and mast bracket parts as shown in Figure 1. Lineup the holes in the 3 boom sections as shown. The front and rear boom sections should meet at the center of the boom insert (Item 13).

**NOTE:** Another complete set of element mounting holes exist in the vertical plane and is not shown in Figure 1. This set has identical spacings between holes but is offset approximately 6 3/4 inches towards the rear of the boom assembly. This is 1/4 wave (90 degrees) at 435 MHz.

After assembly, the boom-to-mast bracket may be rotated on the boom so that after mounting, the elements are in an "X" configuration. Securely tighten the 1/4" - 20 x 3/4" hardware when the bracket is in the desired position. Securely tighten the #10 - 24 x 1 1/2" bolt which holds the coax support boom to the rear boom.

**NOTE: To obtain a better mechanical balance, place the boom-to-mast brackets (Items 14 and 15) and boom insert (Item 13) between D3 and D4. The booms may then be joined by the boom splice (Item 36) and 10-24 x 1 1/2" hardware.**

Item No.	Description
10	Boom, front, 1 1/8" x 62 11/16"
11	Boom, rear, 1 1/8" x 60"
12	Boom, coax support, 1" x 12"
13	Boom insert, 1 1/4" x 6"
14	Clamp, boom-to-mast
15	Back-up plate
17	Caplug, 1 inch, black
18	Caplug, 1 1/8 inch, blue
22	Bolt, hex head, #10-24 x 1 1/2"
24	Bolt, 1/4"-20 x 3/4", hex head
25	U-bolt, 5/16" x 3 5/8"
28	Nut, #10-24, hex
29	Nut, 1/4"-20, hex
30	Nut, 5/16"-18, hex
32	Lockwasher, 1/4"
33	Lockwasher, 5/16"
34	Lockwasher, #10
36	Boom splice, 1 1/4" x 6"

Figure 1  
 Assembly of Boom and Boom-To-Mast Bracket

## ASSEMBLY OF DRIVEN ELEMENTS

Select the two (2) driven elements,  $\frac{3}{16}$ "  $\times$  12  $\frac{1}{4}$ ", marked with a single black color band need one end of each. Also select the insulators and pushnuts as shown in Figure 2.

Push one of the element insulators (Item 19) onto each Driven Element (DE) so that its shoulder is  $5 \frac{9}{16}$ " from the nearest end (as shown in Figure 3). Insert the long end of each DE into the driven element mounting holes on the rear boom section, as shown in Figure 2.

Slide another element insulator (Item 19) over the other end of the DE's, and push it onto each element until it seats into the mounting hole. Recheck the exposed length of the DE's and reposition if necessary.

Carefully slip the  $\frac{3}{16}$  inch pushnuts (item 27) over each end of the two (2) driven elements, and push them along each element until they are snug against each element insulator. Check the exposed length of each DE during this process, to ensure the correct dimensions.

NOTE: You may wish to use the short length of tubing to help push the element insulators and pushnuts. If you accidentally slide a pushnut on too far, then you should cut it off the element and try again with one of the spare pushnuts.

Select the DE T-Bars (Item 20), and  $\frac{3}{16}$  inch tubing clamps (Item 21), and associated hardware. Assemble these parts to the driven elements as shown in Figures 3 and 4. When the coax assembly is installed later you will decide on either LHCP or RHCP for the unswitched polarization. See Figures 6 and 7.

AO-0215-C-002

Item No.	Description
2	Driven Element, $\frac{3}{16}$ " $\times$ 12 $\frac{1}{4}$ "
11	Boom, rear, 1 $\frac{1}{8}$ " $\times$ 60"
12	Boom, coax support
19	Insulator, element
27	Pushnut, $\frac{3}{16}$ " I.D.

for Parts Breakdown -  
Typical Both Places**

**Figure 4**  
**Orientation of Driven Element Connection**

### ASSEMBLY OF OTHER ELEMENTS

Select the two (2) reflector elements, 3/16" x 13", marked with two black bands near one end of each. Also select four (4) insulators and four (4) pushnuts.

Install the reflector elements in the reflector mounting holes as shown in Figure 2. Use the same methods as described for the driven elements along with the exposed length given in Table 1.

Select one each of elements - D1, D2, D3, D4 and D5. Identify these elements by the length and color bands listed in Table 1. Install these elements on the rear boom section in the horizontal set of holes shown in Figure 1 and 2. Start with D1 adjacent to the driven element. Use the insulators and pushnuts and assemble in the same manner as described earlier.

Select one each of elements - D1, D2, D3, D4, D5, and D6. Install these elements on the rear boom section in the vertical set of holes shown partially in Figure 2. Start with D 1 adjacent to the horizontal driven element. Use the insulators and pushnuts and assemble in the same manner as described earlier.

Select one each of elements - D6, D7, **D8, D9, D10, D 112**, and D13. Install these elements on the front boom section in the horizontal set of holes shown in Figure 1.

NOTE: The front boom section has 8 sets of holes in the "horizontal plane" and 7 sets of holes in the "vertical plane".

Select the remaining elements - D7, **D8, D9, D10, D 11, D 12** and D 13. Install these elements on the front boom section in the remaining holes in the vertical plane.

Item No	Part No.		Total Length		Exposed Length		Color Band
			Inch	mm			
1	160057	R	13	330	5 15/16	151	Black (2)
2	160058	DE	12 1/4	311	59/16	141	Black
3	160060	D1/D2	11 3/4	298	55/16	135	Brown
4	160061	D3	11 5/8	295	5 1/4	133	Orange
5	160062	D4	11 1/4	286	5 1/16	129	Yellow
6	160063	D5	11 3/16	284	5 1/32	128	Green
7	160064	D6	11 1/16	281	4 31/32	126	Blue
8	160065	D7	10 15/16	278	4 29/32	125	Violet
9	160066	D8-D13	10 13/16	275	4 27/32	123	(None)

Table 1  
Element Length & Color Band Identification

After the installation of all elements, check each exposed length from Table 1. Also check each set of 15 elements to make sure the elements are in the proper order. If any element has to be adjusted or moved, there are extra pushnuts supplied for partial reassembly.

### ATTACHMENT OF COAX ASSEMBLY

Select the coax/circularity switch assembly (Item 16) and the remainder of the No. 8 hardware (Items 23,26 and 31). Attach one of the two sets of terminals to the front Driven Element's T-bars (Item 20) as shown in Figures 5 and 6.

Use black electrical tape, and secure this coaxial cable to the boom at two locations between the elements. See Figure 5.

The other coaxial cable coming from the coupler tube should make a single loop and its' terminals should attach to the rear DE's T-bars, as shown in Figure 5. Use black electrical tape to secure this coaxial cable,

NOTE: To achieve LHCP in the unswitched mode, the feedpoint solder lugs should be positioned as shown in Figure 6.

A0-0215-C-005

**Figure 5**  
**Attachment Of Coax Assembly**

AO-0215-A-008

**NOTE: Looking at rear end of boom and encapsulated feed points.**

**Figure 6  
Feedpoint Orientation for LHCP  
in the Unswitched Mode**

AO-0215-A-009

**NOTE: Looking at rear end of boom and encapsulated feed points.**

**Figure 7  
Feedpoint Orientation for RHCP  
in the Unswitched Mode**

To achieve RHCP in the unswitched mode, the feedpoint solder lugs should be positioned as (random

shown in Figure 7. The opposite polarization results when 9-15 volts DC is applied to the red and black wires. The black wire is at ground potential, and is directly connected to the shield of the coax, therefore a single wire may be used to switch this antenna if the minus (-) side of the switch power supply is connected to the shield of the coax in the shack.

Either LHCP or RHCP will result if these at attachment procedures are not followed (random attachment). The opposite polarity results when switched. In no case, will linear polarity result if both Driven Elements are fed.

Table 2  
VSWR Chart

### INSTALLATION

The 70-30 SAT OSCAR-Beam may be centered mounted, and a fiberglass or other type of non-conducting boom must be used to achieve circular polarity. The boom-to-mast bracket will fit booms with 1 1/4" - 15/8" diameters.

The DC switching cables and feedlines must be routed off the rear of the boom to achieve circular polarity. A low loss cable such as Belden 8214 or 9913 should be used with Type N connectors.

**WARNING:**  
**DO NOT allow any part of the antenna to touch power lines. This could cause severe burns or fatal injuries.**

When mounting the 70-30 SAT OSCAR Beam above any other antennas, allow at least 6 feet for clearance of the rear boom.

When mounting the 70-30 SAT OSCAR Beam on a common horizontal boom with other beams, allow at least 5 feet (center-to-center). The elements should be at a 45 degree angle with respect to the boom. This will minimize interactions between the antennas.

### RAIN:

During and after a rain shower water droplets may collect on the elements. These droplets will cause the elements to appear electrically longer (lower in frequency) and may affect the gain and VSWR. You may wish to wipe any excess oil off the elements before assembly. This will help the elements shed water faster. Also, after a rain shower, rotate or shake the antenna to shake off the water droplets.

### Service Information

If you are encounter technical problems and need assistance, you should contact Hy-Gain Customer Service Department.

All requests, inquires, warranty claims, or for ordering replacement parts, contact:

## METRIC CONVERSION

Converting American measurements to Metric:  
Using the scale below to identify lengths of bolts,  
diameters of tubes, etc. The American inch (1")  
and foot (1') can be converted in this way.

$$1 \text{ inch (1")} = 2.54 \text{ cm}$$

$$1 \text{ foot (1')} = 30.48 \text{ cm} \quad \text{Example: } 42" \times 2.54 = 106.7 \text{ cm}$$

FRACTION AND METRIC EQUIVALENTS FOR ONE INCH			
Fractional Inch	Millimeters	Fractional Inch	Millimeters
1/16	1.588	9/16	14.288
1/8	3.175	5/8	15.875
3/16	4.700	11/16	17.463
1/4	6.350	3/4	19.050
5/16	7.937	13/16	20.638
3/8	9.525	7/8	22.225
7/16	11.112	15/16	23.813
1/2	12.700	1	25.400
